

Protect people, save lives and capture offenders with CSAS Find

CSAS Find transforms frontline policing by helping officers conduct missing and wanted investigations more efficiently. It supports forces to achieve faster results whilst saving time and money.

Our first SaaS solution builds on our award-winning CSAS software, enabling smoother collaboration for locating missing and wanted individuals.

Collaborate in real time to find people

With connectivity at its core, CSAS Find provides police with a more responsive frontline and empowers them to collaborate across desktop, mobile and tablet.

Other key benefits include:

- Helps deploy resources to the right areas at the right times
- Improves communication, coordination and information sharing
- Provides real-time access to critical data and visualisation tools
- Enables teams to work seamlessly across desktop and mobile

319,000

missing incidents recorded by police
in one year

91%

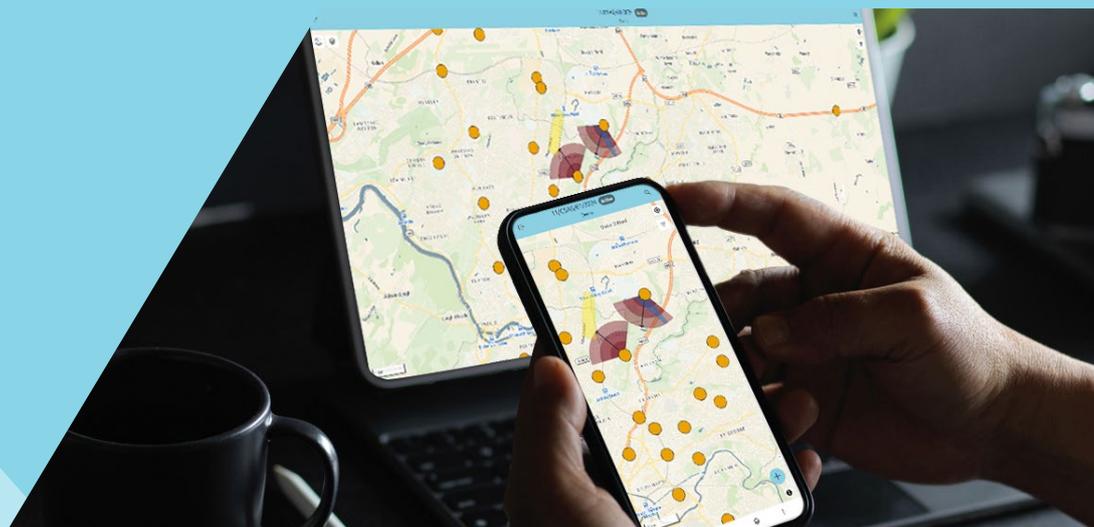

incidents are considered
medium or high risk

156,000

individuals recorded missing during
the same period

*Stats cover England and Wales, from 2022-2023 National Crime Agency UKMPU Report.

Revolutionising investigations, improving outcomes

As identified by HMICFRS, there is a significant link between cases of missing children and exploitation. More effective missing persons investigations improve safeguarding and minimise danger for vulnerable young people.

The first 72 hours are critical in missing persons cases. CSAS Find gives officers the tools and functionality to locate people quickly.

Key product features

- Cloud based for enhanced operational efficiency
- Evidential data parsing with user-friendly drag and drop interface
- Secure, unique and multi-user case management, enhancing collaboration
- Feature-rich mapping with What3Words, address search and POIs
- Distance and travel time visualisation for transport modes, narrowing down search areas
- Cell location and network event visualisations within CDRs, delivering instant access to critical information
- Crowd sourced cell coverage data
- Comprehensive audit capabilities and data retention management options
